

Expecting Moms Embrace Massage

Pregnancy Massage Contributes to Nine Healthy Months

Hope Bentley

During pregnancy physical and emotional changes cascade throughout the body. Nausea, fatigue, swelling, heartburn, headache, and emotional turbulence are just some of the symptoms that come with the territory. Fortunately, massage can help ease these issues, so that the mom-to-be can focus on what's most important: her baby.

The First Trimester

"In the first trimester I see a lot of cases of nerves," says Megan O'Connor, a New York-based certified prenatal massage therapist. "Massage can give reassurance." This is largely because newly pregnant women may experience a range of emotions--elation, anxiety,

founder of Niara Healing Arts Massage Therapy and Perinatal Support Systems, "It is absolutely safe and can be very beneficial for an expecting mother."

Having said that, there are some precautions to take when considering prenatal massage. If it is a high-risk pregnancy or there's a history of complications--diabetes, high blood pressure, miscarriages, placenta previa, preeclampsia, or any other medical condition--a midwife or doctor should be consulted before scheduling a massage. In addition, it is very important for pregnant clients to speak openly with their massage therapist about any concerns or issues.

Massage can help contribute to a healthy pregnancy--and a healthy baby.

contentment, and even fear--made more poignant by the hormonal changes that accompany pregnancy. Fortunately, massage therapy can help ground an expecting mother and ease the emotional roller coaster that comes with pregnancy.

But is massage safe in the first trimester? According to Susanrachel Condon,

On the other hand, bodywork techniques like shiatsu access the meridians used in acupuncture, including trigger points that can relieve nausea. According to O'Connor, a good therapist will also teach a mother-to-be how to activate the trigger points herself, as most nausea treatments are more

effective when applied at least three times a day. Techniques such as this can be a great relief to a woman navigating the early days of pregnancy.

The Second Trimester

A woman in her second trimester may begin to have trouble with circulation, sometimes because the baby's weight begins to pinch the major veins in the mother's legs. Poor circulation can cause swelling of the extremities, headaches, and exacerbated carpal tunnel syndrome. Massage will increase circulation and help create space in the body to relieve the pressure from the baby's weight. Condon explains that weight gain and joint laxity can cause women to feel off balance and clumsy. Massage can relax the muscles around the joints and ground and balance a pregnant woman.

The Third Trimester

As the baby grows heavy in the final trimester of pregnancy, major changes are likely to occur in the musculoskeletal system, and massage can become even more essential.

"A lot of women feel discomfort in their lower backs because the womb is moored to the sacrum, which is that triangle of area at the base of the spine," O'Connor says. "The weight of the womb pulls on that mooring and can be very uncomfortable."

Women may also experience discomfort in their abdomen. As the baby grows, the mother's muscles are stretched, her organs are compacted, and her lungs are compressed. Massage can minimize or prevent abdominal muscle tear, a complication that happens with some women. A practitioner can also help reposition the baby to alleviate discomfort and ease breathing.

And when labor finally begins, massage can help facilitate the birth, perhaps especially appealing for women considering natural childbirth.

On the Table

But how exactly does a pregnant woman--complete with enormous tummy and tender chest--receive a massage? Many prenatal massages are given with the pregnant woman on her side, semi-reclined, briefly on her back,

or on a specially designed pregnancy massage table, and often with a network of pillows for support.

Condon explains that prenatal massage is not simply a regular massage except in a different position. A qualified prenatal massage therapist will know the changing physiognomy of a pregnant woman and will tailor the massage to the needs of the client.

Postpartum Massage

Now that baby is here, mom needs a massage more than ever. Says O'Connor, "I think postpartum massage is extremely underrated."

After baby arrives, bodywork can help a new mother ease back into her body again, relax sore muscles, address any abdominal muscle strains or tears that occurred during pregnancy, and cope with the life changes and lack of sleep

that come with a new baby. In addition, the uterus will sometimes linger low in the abdomen instead of returning to its proper place. A Maya abdominal massage therapist can help restore the uterus to its proper position.

Nursing moms may feel reluctant to book a massage due to leaking breasts, but O'Connor says not to worry. "Women shouldn't be concerned about massage while they're nursing, even if they feel like an uncapped fire hydrant!" she says. Practitioners will accommodate nursing women, with proper draping and towels.

Pregnancy is an important time that needs to be honored, and prenatal massage plays an important role. As the body goes through miraculous changes, bodywork facilitates pregnancy and helps the expectant mother stay comfortable, connected, and healthy.

Prenatal massage can greatly benefit an expecting mother throughout her pregnancy.

Prevent the Afternoon Slump

Some Tips for P.M. Energy

Jerry V. Teplitz

If you're like most people, you've experienced the afternoon slump. You know the feeling -- it's only 2 p.m., yet you feel drained. Fortunately, you can employ methods to reduce the slump's frequency and shorten its duration.

DRINK WATER.

Your body uses water even if you're not exercising. If you wait until you feel thirsty, you're already dehydrated. Keep a water bottle handy all day.

AVOID SUGAR AND SIMPLE CARBOHYDRATES.

While a mid-afternoon candy bar may give you a quick rush, it actually worsens the slump. Instead, choose protein-rich foods and complex carbs.

EAT SMALL MEALS.

Have six small meals over the course of the day instead of three large ones. Big meals cause the digestive process to divert blood from your brain to use in the digestive track.

EVALUATE YOUR LIGHTING.

Most offices are lit with cool, white

fluorescent tubes, which have a terrible effect on how people feel and function at work. A better option is full-spectrum, fluorescent tubes.

TAKE TIME FOR WALKS.

Walking gets your blood circulating, helps you breathe better, and stimulates your brain due to the increased blood flow. Take a 5- or 10-minute walk during the day.

MEDITATE.

Meditation is great for rejuvenating your body. By meditating for 15 to 20 minutes twice a day, you're keeping your body continually energized and rested.

TAKE TIME TO BREATHE AND STRETCH.

Deep breathing exercises give you an energy boost. Also, stand up and stretch to increase blood flow and stimulate the lymphatic system.

HANDLE NEGATIVITY.

Negative people and images can have a draining effect on your energy. Make a conscious effort to stay positive.

Avoid the drain office settings can bring on.

What Your Massage Therapist Needs to Know

Angela England

Most massage therapists guide first-time clients through an intake process that includes discussing health histories and other medical concerns. But talking with your therapist about these things should not end with your first massage. Before each session, take a minute to speak with your therapist about any new medical conditions or injuries, lasting aches and pains, or any other changes in your life. Here are some of the issues your massage therapist should know about.

Medical Changes

It's a good idea to regularly update your medical record with your therapist, especially if you've been diagnosed with an illness or medical condition--such as high blood pressure, heart disease, diabetes, a chronic autoimmune disease,

or skin allergies--or are taking any new medications. Certain medical concerns preclude you from receiving massage. Other conditions, such as pregnancy, simply change the way your practitioner approaches the session.

A New or Acute Injury

Maybe you spent hours driving to a destination getaway and your shoulders ache, or you stepped off the porch wrong and sprained your ankle. Any time you have a new ache, pain, sprain, twist, or pulled muscle, mention it to your therapist. Depending on the location and extent of your injury, the session may need to be postponed or the injury site avoided until more healing has occurred.

Personal Preferences

This category is less obvious, but equally important. Everyone has unique preferences and sometimes there may be something you would like to change for your next massage. Whether you want to bring your own music, have the temperature adjusted, or be draped in an extra blanket, your therapist can easily adapt as long as you communicate your preferences.

Help your practitioner help you. Take a moment to check in with him or her before your next session.

Angela England enjoys doing massage, gardening, writing, and spending time with her three young children.

SPRING HAS SPRUNG!

As you shake off the winter doldrums and head outdoors this spring, add massage to your list of fun and healthy physical activities- gardeners, bikers, hikers, runners, golfers, swimmers- this means you! When you increase your level of physical activity, you may experience soreness, tightness or stiffness as your body adjusts to this new level of fitness. Receiving regular massage can help resolve muscular tension, speed recovery time and keep you limber. Stay on track with your fitness goals, and make massage a part of your wellness program.
